Wireless Gen2 4 Button Two Bed Station

Description

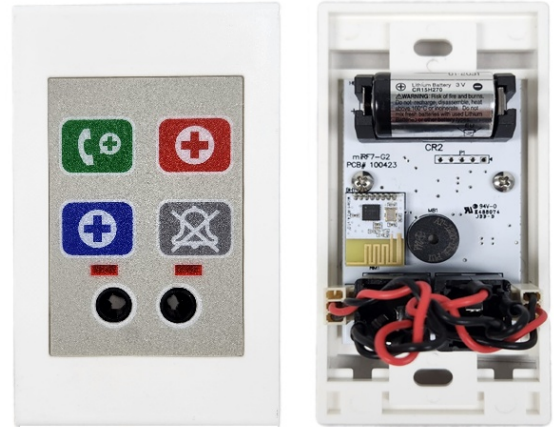

The Wireless Gen2 4 Button Two Bed Station is a multifunction four button panel that can transmit alerts wirelessly to a miPOSITION enabled miALERT Nurse Call System using the proprietary miNET wireless transmission standard. Alerts can be initiated using the face buttons, or up to two devices connected via quarter inch jacks, such as bed cords or bed pads. Custom face button options are available on request.

The unit mounts to a 1-gang box and the wireless design allows for easy installation with no cable runs. Alerts can be transmitted up to 100ft under nominal conditions. Low battery reporting is available through the miALERT Event Management Software.

These panels can also be used with Gen2 wireless enabled miALERT voice to room devices.

Features

- Face buttons for general alert, code blue, and staff alert.
- Physical cancel button.
- Two 1/4" jack bed-cord inputs with cord-out alerting.
- Custom face button options available on request; contact miALERT sales for more information.

Specifications

Unit: 105mm x 53mm x 49mm

Unit with mounting plate: 115mm x 70mm x 49mm

Unit exposure from wall: 115mm x 70mm x 12mm

Power: Single 3V CR2 battery cell. Expected battery life under normal conditions is approximately 2 years. Units should be tested at least once a month to ensure battery condition is nominal. For low battery reporting a miALERT Event Management Software server must be present.

Product is designed to conform to the UL 2560 standard for wireless nurse call devices.

For replacement batteries, contact NSI Distribution (www.nsidistribution.com).
